

## **Data Robotics Corporation released the trial version of HOTSwap - a Complete Backup Software Suit**

*"Easy", "Quick" and "Complete Automation" are the key words in the design of HOTSwap product*

Hyderabad, Andhra Pradesh, November 16, 2009 /[India PRwire](#)/ -- Data Robotics Corporation is pleased to announce that anyone can download the HOTSwap Backup Suit and start working with it now. The trial period is 30 days which should be enough to test the system to the full extent in your own company. "Easy", "Quick" and "Complete Automation" are the key words in the design of HOTSwap product. On the basis of this design, Data Robotics Corporation has created HOTSwap as an excellent and effective system for managing data backup processes.

HOTSwap belongs to the class of software that allows organizing the efficient working of teams within a company. Its revolutionary innovation is in the simplicity and speed of installation. It is easily installed and it doesn't need lengthy configuration. What is more, in order to implement it in an enterprise there is no need to use expensive system integrators. It is constantly being evolved to encompass the very latest security systems and technology and is the choice of many forward thinking organizations. The trial software was released with a view to demonstrate all of these advantages for the prospective customers.

Never before were the systems of backup management so accessible and so clear. With the introduction of HOTSwap into the market of corporate information systems many problems, that seemed to be part of any automation, will disappear. Difficulties in installing, lengthy implementation and costly operations - HOTSwap puts all of that in the past. According to Kishore Kumar Pilla, HOTSwap will become a de-facto standard in the sphere of automation of backup processes for small and medium sized business. Designed to be completely administration free, HOTSwap can be tailored to help any organization with a comprehensive management console that allows real-time statistics on the status of backup process, totally secure environment, easy to use profile and search facility.

Public availability of the software is only the first step for the project of Data Robotics Corporation. It allows a business to get acquainted with the features of HOTSwap and understand how the system can be quickly launched in an enterprise. To take advantage of our free trial to any organization or for more information, interested companies can send request mail to [support@datarobocorp.com](mailto:support@datarobocorp.com) with details of existing infrastructure and present backup policy.

### **Notes to Editor**

Data Robotics Corporation is a recognized leader in managed data protection and offsite storage services, including online backup, advanced disk-based recovery, high-availability, email archiving, and data lifecycle solutions. Data Robotics Corporation's solutions employ aggressive security and redundancy safeguards while ensuring disaster recovery, business continuity, and regulatory compliance. We at Data Robotics Corporation dedicate ourselves to safeguarding individuals' and organizations' economic viability, achievements, memories, connections, creativity, and privacy by protecting their data with online backup solutions, that are powerful and flexible enough to be used by the most advanced computer user, yet intuitive and simple enough for a novice user to operate.

Data Robotics Corporation was formed around a vision; the vision that was generated from a dream; the dream of creating things that never were; desktop applications that can eventually be integrated together in one package to produce the best and most comprehensive user-experience possible. One of the focal points in Data Robotics Corporation's envisioned road is to provide applications and utilities that others have failed to provide comprehensively, either for the lack of vision or for the lack of interest. Such utilities, like Data Robotics Corporation's backup applications, can make the user's life easier and enhance his productivity at work and home. Data Robotics Corporation aims to become a household name in the Online Backup Industry; providing what competitors couldn't create while simplifying and improving what other companies had already thought of.
